

aws INNOVATE

MODERN APPLICATIONS EDITION

27 & 28 October 2021

Build an offline first cross-platform web and mobile apps with Flutter

Derek Bingham

Senior Developer Advocate

Amazon Web Services

@deekob

Application acceleration needs...

- One single code base to maintain feature parity
- Device connection state to be abstracted
- Simplified conflict detection and resolution
- Data synched seamlessly across clients
- The painless creation of scaffolding code

Leaving the developers

Maximum time to work on features

What is Flutter?

What is Flutter ?

- A cross platform SDK for
 - Android
 - IOS
 - Web
 - Desktop
- First released in 2017
- Uses the 'Dart' language
- Widgets are everything

More Info:

Demo 1 – Flutter, getting started

What are we building?

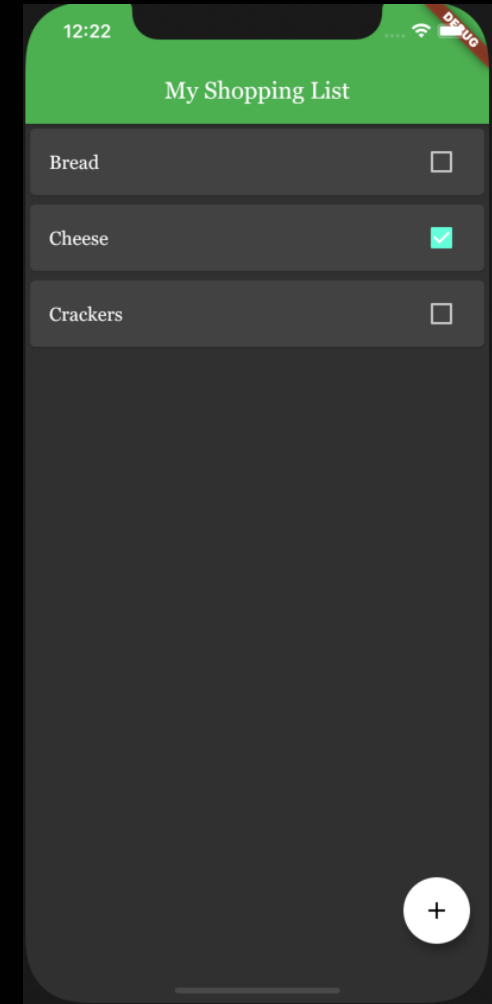

MyShoppingList

DisplayList

AddItems

BuyItems

Demo 2 – Building the UI

What is AWS Amplify?

Develop with AWS Amplify:

Full-stack developer experience across 10 feature categories

Develop

Configure AWS
backends fast

Seamlessly
connect frontends

CLI

Admin UI

Libraries &
UI Components

Feature categories

Authentication

Analytics

DataStore

PubSub

Storage

Predictions

API (GraphQL & REST)

Interactions

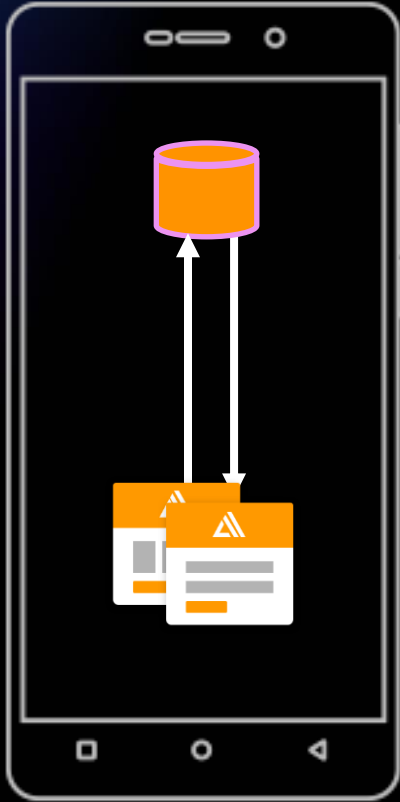

Functions

Notifications

*Powered by AWS services such as
AWS AppSync (GraphQL API) and Amazon Cognito (Authentication)*

Amplify DataStore: Data flow (disconnected)

- Simple API
- Works on local datastore (SQLite)
- No backend connection needed

Demo 3 – Offline persistence

The BLoC pattern

```
1 ElevatedButton(  
2     onPressed: () {  
3         BlocProvider.of<ShoppingListItemCubit>(context)  
4             .createListItems(_itemNameController.text);  
    }
```

```
1 void createListItems(String itemName) async {  
2     await _shoppingListRepo.createListItems(itemName);  
3 }
```

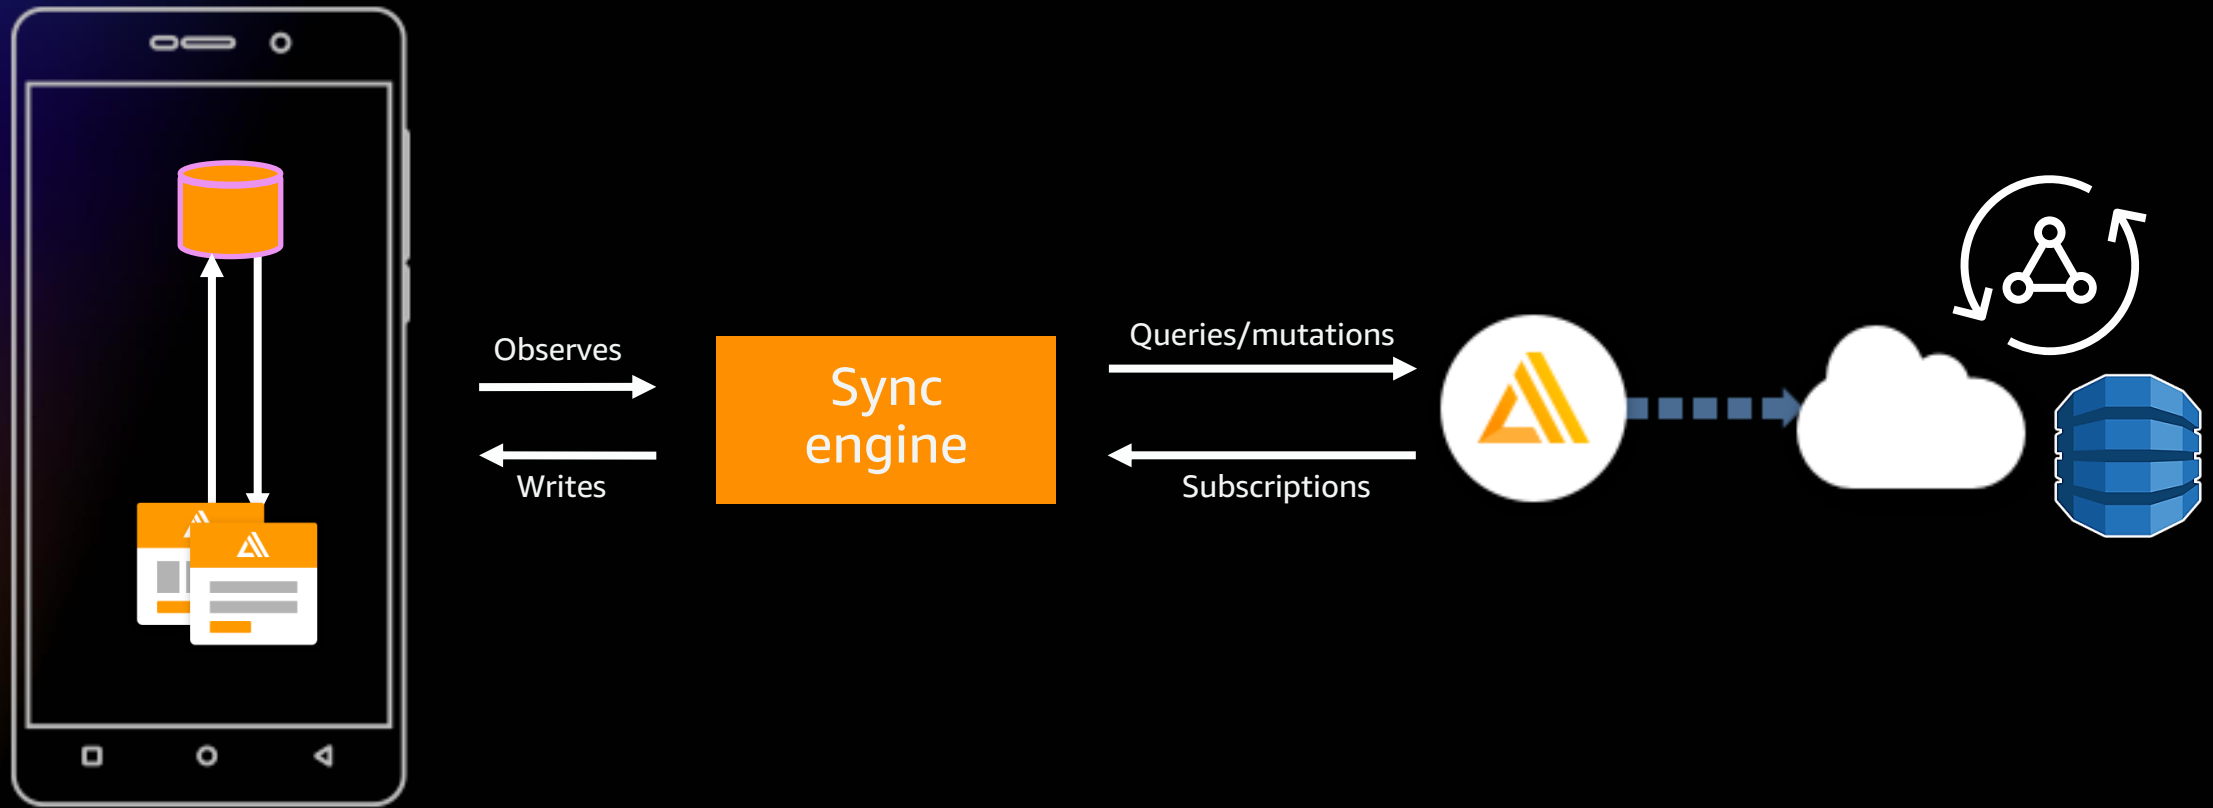

```
1 Future<void> createListItems(String itemName) async {  
2     final item = ShoppingListItem(itemName: itemName, isComplete: false);  
3     try {  
4         await Amplify.DataStore.save(item);  
5     } catch (e) {  
6         throw e;  
7     }  
8 }
```

UI

BLoC

Repository

Amplify DataStore: Data flow (connected)

Demo 4 – Creating the backend

Application acceleration

- A single code base
- Connection state was abstracted from me
- Didn't need to worry about glue code
- Data was synchronised between devices
- Concentrated on value add features

Go build!

AWS Training and Certification

Accelerate modernization with continuous learning

Free digital courses, including:
[Architecting serverless solutions](#)
[Getting started with DevOps on AWS](#)

Earn an industry-recognized credential:
[AWS Certified Developer – Associate](#)
[AWS Certified DevOps – Professional](#)

Hands-on classroom training
(available virtually) including:
[Running containers on Amazon Elastic
Kubernetes Service \(Amazon EKS\)](#)
[Advanced developing on AWS](#)

Create a self-paced learning roadmap
[AWS ramp-up guide - Developer](#)
[AWS ramp-up guide - DevOps](#)

Take [Developer](#)
[and DevOps training](#)
today

Learn more about
[Modernization training](#) for you
and your team

Thank you for attending AWS Innovate Modern Applications Edition

We hope you found it interesting! A kind reminder to **complete the survey**.
Let us know what you thought of today's event and how we can improve the event
experience for you in the future.
