

INNOVATE

AI/ML EDITION

Reinventing industrial operations with AI and ML

Simon Johnston

AI/ML Principal Specialist

AWS

What is the cost of downtime?

Agenda

1. How industrial leaders are leveraging AIML
2. AWS technology approach
3. How to get started

How industrial leaders are leveraging AIML

Digital transformation increasing across asset-heavy industries

**Discrete and
process
manufacturing**

**Transportation
and logistics**

Agriculture

**Power utilities,
and renewables**

**Energy
(oil and gas)**

Mining

Adoption by leaders

Industrial challenges

Data access

Data management

Security

Real-time decision making

Scale

Key customer needs across common industrial workloads

**Engineering
and design**

**Production and
asset optimization**

**Supply chain
management**

**Worker safety
and productivity**

**Quality
management**

**Smart products
and machines**

Data silos & insights

How Volkswagen Connects 124 Factories to the Cloud Using AWS | Volkswagen Group

The Volkswagen Group manufactures about 11 million cars per year and brings 200 million parts per day into its factories—a massive scale at which to operate an effective global supply chain. Volkswagen is working with AWS to move its 124 factory sites to a single architecture: the Volkswagen Industrial Cloud. As a next step, the Group will integrate Volkswagen's global network of more than 1,500 suppliers into the Industrial Cloud. The company uses AWS machine learning services—running algorithms using information gathered from sensors on the shop floor—and AWS Outposts.

Machine learning in real time, at the edge

“We are using AWS data-analysis technologies to predict ... precisely how fast converting lines should run to avoid tearing. By reducing paper tears, we have increased profits by millions of dollars for one production line.”

Steve Bakalar, Vice President of IT/Digital Transformation, Georgia-Pacific

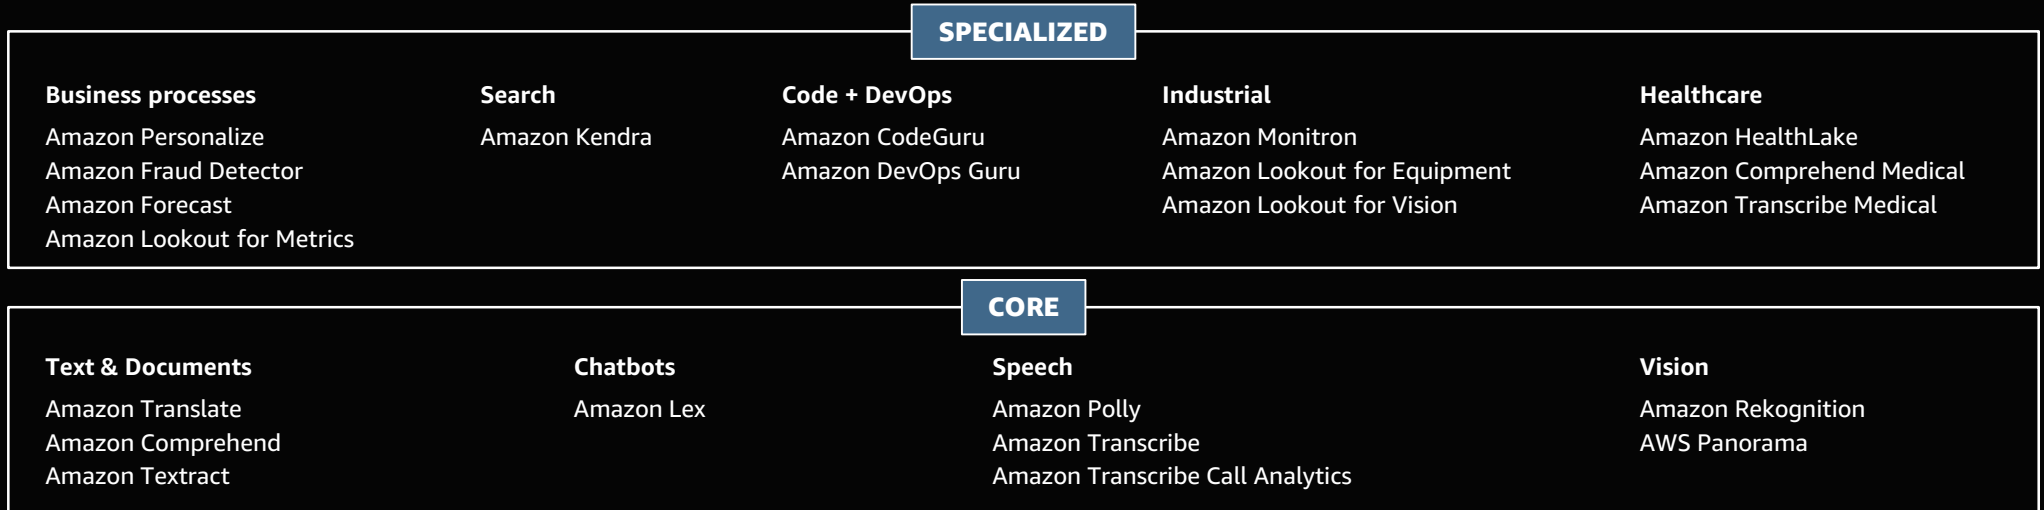

<https://aws.amazon.com/solutions/case-studies/georgia-pacific/>

AWS technology approach

The AWS ML Stack

BROADEST AND MOST COMPLETE SET OF MACHINE LEARNING CAPABILITIES

AI use cases for industrial customers

Improve operational efficiency at the edge

Improve asset performance by reducing unplanned downtime

Automate visual quality inspection

Forecast demand and manage inventory

AWS Industrial AI services

COMPUTER VISION

AWS Panorama – Improve your operations with computer vision at the edge
aws.amazon.com/panorama

Amazon Lookout for Vision – Spot defects and anomalies in industrial products using computer vision
aws.amazon.com/lookout-for-vision

Computer vision enables new capabilities across industries

Improve the performance and productivity of industrial processes

Monitor social distancing and crowd density for public health

Gather data on retail analytics, people counting, and line length monitoring

Enhance worker safety in the warehouse, the office, and on the factory floor

AWS Panorama Appliance

POWERFUL CV APPLIANCE FOR INDUSTRIAL ENVIRONMENTS

Set up in minutes

Automatically detects IP cameras

Runs custom models or production-ready CV apps at the edge

IP62-rated ruggedized device

Nvidia Xavier AGX GPU

Multiple camera streams in parallel

Multiple models per stream

AWS and Deloitte help Port of Vancouver improve supply chain visibility with computer vision-based container tracking

"By adopting computer vision at the edge, Port of Vancouver is increasing its competitiveness while preserving privacy."

- Greg Rogge, Director, Land Operations and Security, Port of Vancouver

"Computer vision can enable the proper assignment of cost and continue to identify efficiency improvement opportunities in the existing process."

- Don MacPherson, Partner, Deloitte

<https://aws.amazon.com/partners/success/port-of-vancouver-deloitte/>

Amazon Lookout for Vision

Spot defects and anomalies using CV

- Improved defect detection speed, consistency, and accuracy compared to manual inspection
- Lower cost of quality control inspection compared to machine vision systems
- Start building a model with as few as 30 images
- No ML experience required

Dafgård's automates and scales inspection

Dafgård's is a household name in Sweden, manufacturing 15 different types of frozen pizzas at over 100 pizzas per minute.

"To uphold our brand and deliver the freshest and tastiest customer experience, we want to ensure that all our pizzas are adequately covered in cheese and with the correct toppings. Early in our production process we installed a machine vision system to detect proper coverage of cheese across a pizza's surface. While this system served well for our original inspection requirement, the system is unable to detect defects on new product types that include multiple toppings. Amazon Lookout for Vision automates and scales inspection of diverse product types such as a cheese pizza with vegetables using the same machine vision system. We successfully expanded our quality assurance for new product types with minimal impact to operations."

Fredrik Dafgård, Head of Operational Excellence & Industrial IoT

How to get started

Help from experts

MACHINE LEARNING CUSTOMER JOURNEY

DISCOVER

Design your future with ML

DELIVER

Bringing your ML project to life

SCALE

Evolve with AWS

IDEATION SESSION

Understand the art of the possible, diagnose immediate business challenges and identify high priority use case(s)

OUTPUT:

Problem statement(s)

**START
HERE**

DISCOVERY WORKSHOP

An engagement where business and technology stakeholders work backwards from 1 to 2 ML business opportunities

Input:

Problem statement & use cases

OUTPUT:

ML Blueprint

MINIMAL VIABLE PRODUCT (MVP)

A 2-Pizza team* delivers a production-ready solution to pilot

Input:

Successful POV

OUTPUT:

AWS Public Reference

AI-POWERED ORGANISATION

A program aimed at assisting customers to become self-sufficient, efficient and to realise the value with ML moving to multiple use cases and ML workloads

READINESS ASSESSMENT

A tool to understand the organisational readiness to embrace ML across the dimensions of data, people, operations, strategy and governance.

OUTPUT:

Current and target state

PROOF OF VALUE (POV)

Involves a data health-check and the building of a basic solution to prove the approach and Return on Investment (ROI)

Input:

Statement Of Work (SOW) as formulated in the ML Blueprint

OUTPUT:

POV show case & ROI validation

POST PRODUCTION

Review solution adoption, change management and lifecycle requirements

AWS Machine Learning (ML) Training and Certification

AWS is how you build machine learning skills

Courses built on the curriculum leveraged by Amazon's own teams. Learn from the experts at AWS.

aws.training/machinelearning

Flexibility to learn your way

Learn online with on-demand digital courses or live with virtual instructor-led training, plus hands-on labs and opportunities for practical application.

explore.skillbuilder.aws/learn

Validate your expertise

Demonstrate expertise in building, training, tuning, and deploying machine learning models with an industry-recognized credential.

aws.amazon.com/certification

Thank you for attending AWS Innovate – AI/ML Edition

We hope you found it interesting! A kind reminder to complete the survey.
Let us know what you thought of today's event and how we can improve the event experience for you in the future.
